

CRIMINAL JUSTICE REFORM

I'm a Chinese immigrant and an American citizen. I'm in wrongful conviction which was decided by detective(s) and Court before investigation, only because I'm a Chinese immigrant and Chemist, thus the first charge immediately was terrorist! which was later dropped.

To convict me wrongfully, almost all kinds of the misconducts of detectives and investigator and prosecutor and judge and lawyer in legal reports happened in my case. Detective(s) destroyed exculpatory evidences, and trampled upon law of interview and search; investigator used jail inmate to do 100% perjury, and led some state witnesses to make false evidences or testify falsely; prosecutor used false lab data, evidences and perjury, distorted evidences to mislead jury, hid exculpatory evidences and slandered me, to convict me wrongfully; Judge knew many above matters, but because his discrimination of Chinese immigrant he supported these misconducts; my attorney was irresponsible and ineffective. The above matter happened in Middlesex County, New Jersey State. The following are my proposal for criminal justice reform, so that others will not suffer wrongful conviction.

I. Artificial Intelligence replace Judge

Artificial intelligence (AI) can ensure current-most just, fair trials to all defendants; AI can disregard race, gender, religion, social status, political party, or colleague relationship of prosecutors. Just and fair trials ensure correct verdicts and sentences.

How to replace Judge by AI? Impute all cases, constitution, laws, regulations, and rules since the beginning of New Jersey State, U.S.A. Supreme Court and constitution until now; some of them have been repealed, so AI marks them as repealed. By doing so, AI combines all Judges' opinions on each every matter, and neutralize left, right and central opinions on each every matter.

At a jury trial, Judge watches AI to make decisions pursuant to laws, jury hear and watch the trial, prosecutor and defense attorney present evidences and witnesses and raise arguments and questions to AI, then AI makes decisions on these issues; at the end of trial, AI give jury instruction to jury. Because AI guides the trial in a just and fair way, jury have solid
